

Pace offers state of-the-art gateway platforms for a wide range of broadband technologies

Pace will always focus on the quality of its products to ensure its customers are getting true value. Time and money is invested in the design of Pace gateways and working closely with chip set manufacturers and ODMs ensures we deliver intelligently designed, long lasting and future proof gateways.

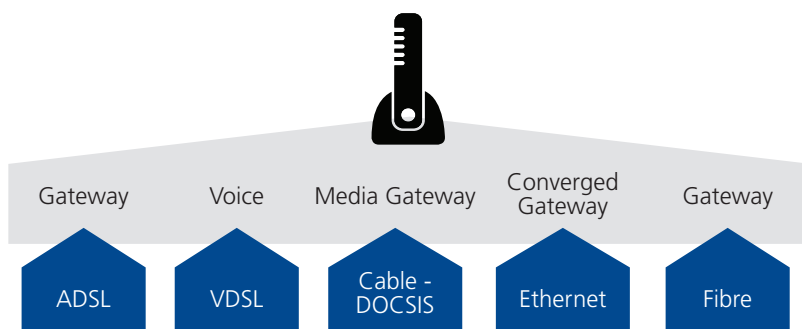

Why Pace

Pace Intelligent Gateways are the first point of contact between you, your subscriber, and their entire digital home.

Customised to meet your broadband service needs, optimizing your network resources and ensuring quality of service in the home, Pace gateways allow operators to provide subscribers with a superior broadband and home networking experience while reducing their OPEX.

Pace gateways are available for a variety of infrastructures and broadband types. Whether it's ADSL, VDSL2, Cable or Fibre, our products support your network architecture.

The added benefit of working with Pace is our unique Helium Gateway Software which operates on third party devices as well as Pace devices, allowing the operator to offer its customers one UI and one consistent management platform thereby reducing device swap outs and improving customer satisfaction.

Network architecture

Technology Brief

- One hardware platform means flexibility to build bespoke solutions for operators
- A variety of device classes across a wide variety of WAN network interface types for different applications and market needs.
- Customizable design to fit only the options you require improves time-to-market and reduces overall costs.
- Best in class performance avoids problems in the field and improves customer experience.
- Build by specialized ODMs according to Pace quality rules and measures assures high quality of products and minimizes risk of failure in the field.

Pace Gateways

Flexible Design:

- Vertical, Horizontal
- Gigabit Ethernet WAN/LAN Options
- VoIP Options including FXS, FXO, DECT Cat-iq

Advanced Antenna Designs:

- Built-in dual-band Wi-Fi radio with internal antennas
- High power & High gain
- Designed for Data & IPTV

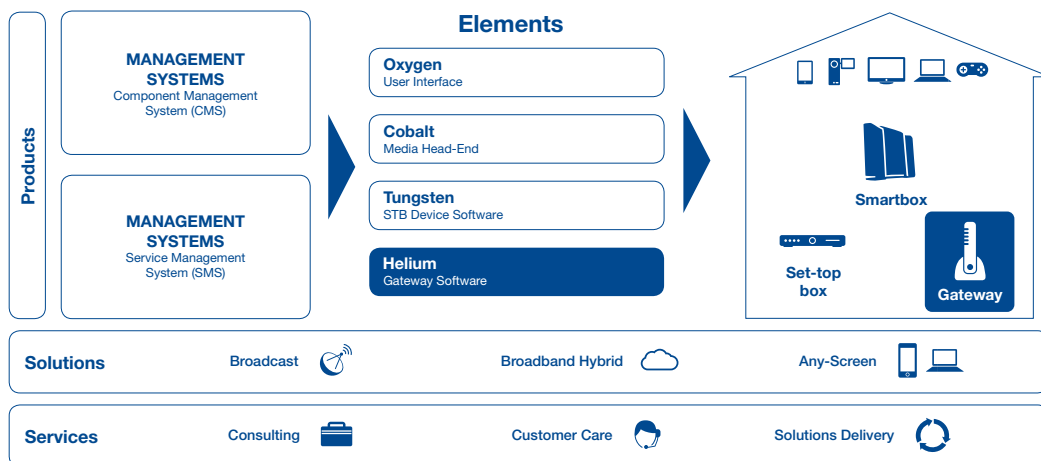

Simplified Modularity:

- Add-on wireless USB sticks
- (Zigbee, Z-wave, 3G, etc.)

Flexible Network Options:

- Smooth WAN technology migration from ADSL over VDSL to fibre with 3G backup
- Cable network with 3G backup
